NSR Intelligence Solutions

Establishing Operational Units | HR |

Information Security | **OSINT** | **SIGINT** |

CYBER | **VISINT & Surveillance** |

NSR offers the ability to know and control by forming local intelligence units for national needs, providing full intelligence gathering, analysis, and integration services for both technological and human assets.

We understand that a responsive, effective, and flexible intelligence solution is critical to a nation's interests, and carefully tailor both technological and human components of our solutions to the unique needs and requirements of each specific customer.

From defining recruitment parameters, through deploying technological and human networks, to the gathering, integration, and analysis of data from SIGINT, VISINT, OSINT, CYBER, and HUMINT sources, we help our customers build, optimize, or expand their Intelligence operations.

Establishing Operational Units

We enable rapid setup of full or partial Intelligence organizations, analyzing operational goals, available resources, target characteristics, technological needs, current assets, and more, in order to help establish an effective, goal-oriented unit.

Human Resources

We offer consulting, as well as implementation services for all human resources aspects of Intelligence unit formation and operation: from personnel recruitment, polygraph tests through training and maintenance of operational skills and conditioning.

Information Security

NSRs Information Security experts analyze risks, requirements, and technology in order to recommend, provide, and train users in a variety of software and hardware systems dedicated to preserving the integrity of your vital data.

OSINT

OSINT covers all information available through "open" sources, including media, web-based communities and user-generated content, public data, professional and academic publications, etc.

NSR provides cutting-edge OSINT tools, as well as offering OSINT personnel recruitment and training services.

Our OSINT capturing and analysis technologies include: Social Network Crawlers & Hackers |Web-based Geographic Mapping tools |Automated monitoring solutions| Sniffing agents |…and more

SIGINT

SIGINT , or "Signal Intelligence" includes capturing and analysis of "communications intelligence"—COMINT, and "electronic intelligence"—ELINT.

NSR offers a range of advanced SIGINT technologies designed for covert operations, as well as personnel training services for our own and other platforms.

Our VISINT capturing and analysis technologies include: Mass cellular interception platforms ǀ Mobile units for locating GSM & UMTS mobile phones, as well as Satellite GSM phones (passive interception) ǀ Mobile audio surveillance units ǀ High and low power jammers ǀ Wi-fi interception solutions ǀ and more

VISINT & Surveillance

VISINT includes visual data, from simple information (surveillance images), to more complex data that requires deciphering by human or technical elements (thermal imaging, etc).

NSR offers a range of advanced VISINT technologies, as well as providing personnel training services for our own and other platforms.

Our VISINT capturing and analysis technologies include: Day/night video with facial recognition in complete darkness up to 100m ǀ Thermal video abilities - ground and airborne ǀ Very small covert video solutions integrated into the object's environment ǀ Complete covert modules ǀ…and more

CYBER

NSR offers the technology and know-how to penetrate and extract information from almost any cellular and computerized system in the world, tracking information transactions, GEO location abilities, and much more.

NSR provides both system and training for local teams.

Our Vision

NSR is a global provider of sophisticated, challenge-focused Security programs, and one of the only companies focused exclusively on services for HLS and Defense integrators and 3rd party providers.

We understand the growing and changing threat-scape, as well as the limitation of the human resources involved in the security solution – and strive to support operators and decision makers through innovative, highly automated, smart HLS solutions.

We know that a security solution is something that the end user has to live with every day, be they government agencies, military assets, or public installations - and we commit to delivering solutions that can and will become an integral and invisible part of the resources we wish to protect.

Our Approach

NSR utilizes a wide variety of proprietary and COTS products and solutions, drawing on proven skills to design and integrate complex solution in multiple environments.

From CCTVs, through biometrics, to tactical UAVs and spectral imaging tools, we are uncommitted to any specific technology, approach or provider. We cast our net far and wide to utilize the most relevant technologies from inside and outside the industry, responding to the specific operational, budgetary, social, and public perception needs of your customers.
