

NSR Mobile Security

Remote Video Surveillance |

Multi Unit C&C Client |

Enterprise Cellular Control Center |

NSR's unique cellular security products offer a range of rapid-deployment solutions that support near-immediate transmission and management of mobile unit security.

Boosted with intelligent transmission algorithms, our mobile solutions provides video, audio and location data even over very weak connections, enabling mobile units of whatever type and spec to function as an integral part of an operational security deployment.

NSR's unique rapid-deployment architecture enables near-immediate deployment, transmission, and management of cellular data, ensuring communications remain viable most demanding cellular environments.

Remote Video Surveillance

NSR's SRM-M is the perfect remote video surveillance solution for cars, vans and trucks, as well as remotely located sites and body-worn applications, allowing users to view live video from any moving platform or location on their smartphone or laptop - anytime, anywhere.

NSR's unique rapid-deployment architecture enables near-immediate transmission and management of mobile unit security, with the 1, 2, 4 channel solution assuring video transmission and security control in even the most demanding cellular environments.

Features: High quality mobile DVR | Global remote monitoring and tracking with GPS functionality | Live bidirectional audio | Removable HDD | Live video streaming Four channels | D1 and VGA recording | Built-in Wi-Fi for wireless backup | Event-driven recording | Video motion detection | Geo-fencing, route deviation, speed alerts | Event notification PTZ control |

Multi Unit Command and Control Client

A full selection of client applications supplied with every NSR security system so customers can use a wide range of devices – desktops, laptops, tablets and smartphones – to view live video from their video gateways.

All client applications play live and recorded video and support remote control of PTZ cameras. The PC-based client application is a powerful tool for monitoring sites remotely, and is suitable for use by individuals and control centers.

Features: Simultaneous connections up to 144 video streams | Simultaneous display of up to 16 video streams | Support for 15 different languages | Simultaneous downloading of multiple events from different gateways/cameras | Configurable notifications | Configurable automated rotation of displayed video streams | Integrated site maps | Integrated GPS maps

Enterprise Cellular Control Center

An enterprise-level management system for control centers that monitor up to 5,000 wireless video gateway units—from public transportation systems, through shopping megaplexes, to building complexes and industrial zones.

The NSR enterprise solution enables control-center personnel to track massive numbers of locations simultaneously, supporting views of live and recorded video from multiple sites, and providing alerts and notifications regarding events that require attention.

The system is highly flexible and configurable, enabling each enterprise to fine-tune various functionalities to specific needs: video gateways can be grouped to simplify the monitoring process, events can be color-coded by type, notification content can be customized, and lists of events can be filtered to display only those events that are of interest at a given moment.

The notification system is designed to facilitate efficient and comprehensive event handling—events can be assigned automatically to specific staff members, and responsibility for handling an event can be reassigned on-the-fly as necessary. Managers can easily monitor the entire event-handling process, seeing the current status of each event and a record of how it has been handled thus far.

Designed for large scale monitoring, and built to work with operators of all technical levels, the NSR enterprise solution is a market leader in flexibility, scalability, and innovation.

Our Vision

NSR is a global provider of sophisticated, challenge-focused Security programs, and one of the only companies focused exclusively on services for HLS and Defense integrators and 3rd party providers.

We understand the growing and changing threat-scape, as well as the limitation of the human resources involved in the security solution – and strive to support operators and decision makers through innovative, highly automated, smart HLS solutions.

We know that a security solution is something that the end user has to live with every day, be they government agencies, military assets, or public installations - and we commit to delivering solutions that can and will become an integral and invisible part of the resources we wish to protect.

Our Approach

NSR utilizes a wide variety of proprietary and COTS products and solutions, drawing on proven skills to design and integrate complex solution in multiple environments.

From CCTVs, through biometrics, to tactical UAVs and spectral imaging tools, we are uncommitted to any specific technology, approach or provider. We cast our net far and wide to utilize the most relevant technologies from inside and outside the industry, responding to the specific operational, budgetary, social, and public perception needs of your customers.
